

# BE PROACTIVE, NOT REACTIVE

## IDENTIFY THE GAPS & RISKS IN YOUR ENVIRONMENT WITH INSENTRA'S CITRIX HEALTH ASSESSMENT SERVICE

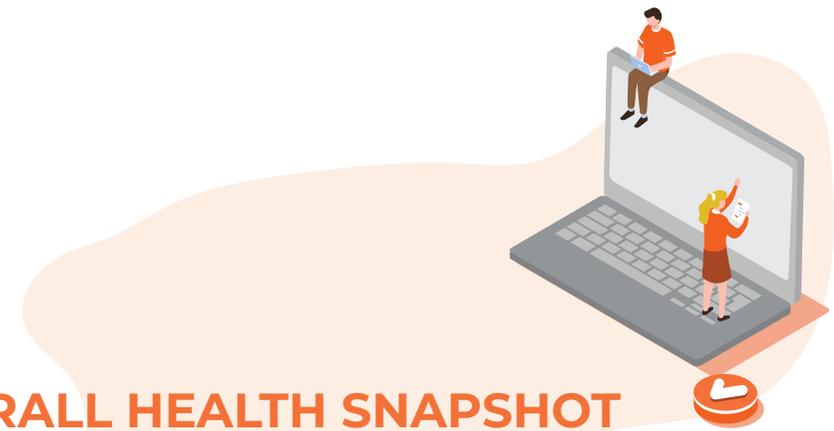

Over time your environment is open to misconfiguration, instability, process and purpose deviation, and security exploitations.

Even environments which seem to be working well have problems lurking which often only appear when access to critical applications are needed most. This can result in degradation of end user experience and productivity.

As part of your assessment the following phases will be completed with the output collated and presented back to you in a Red-Amber-Green (RAG) Report.

- Architecture & design review
- Product installation & configuration review
- Review of system & user performance
- Presentation of recommendation rag report

**Use this new knowledge to focus on projects which will optimise your operations!**

## AN OVERALL HEALTH SNAPSHOT

- Find configuration drift in your environment
- Enable functionality which you're not using
- Boost your infrastructure for user growth
- Re-align to industry best practices

## ACHIEVE...

- **Reduced cost & inefficiencies** by understanding your strengths and weaknesses
- **Increase business productivity** by improving end user experience
- **Minimised downtime** by having eyes under the hood and knowing your environment
- **Best practice configurations** to improve business efficiencies
- **High visibility** of your current Citrix environment

## THIS HEALTH ASSESSMENT IS A KICK START TO ENABLE YOU TO:

- Gain the support you need
- Gain metrics that matter
