

Nulia Case Study: Improving Office 365 Value

Nulia Works helped this engineering firm to achieve significant gains in collaboration and communication with Office 365, improving ROI on existing software assets.

SITUATION

A wide variety of teams exists in our client's ecosystem. 70% of teams are dispersed, straining collaboration and communication and causing hardships which were affecting productivity.

RESULTS

By measuring and analysing their usage the client was able to see the benefits immediately:

- Increased collaboration and engagement using OneDrive and SharePoint.
- The IT department used Teams to coordinate meetings with coworkers, reduce travel to remote offices, and decrease reliance on email for communication.
- Unlocked greater value by improved usage of full Office 365 suite.
- Following this success, the client decided to roll out Teams to other remote departments for better communication and collaboration, with Nulia providing end user enablement.

THE NULIA SOLUTION

Working with the client's CSP partner, Nulia Works was introduced to help users collaborate and communicate from remote locations.

Users were given personalised skills and outcomes supporting their objective to become a more collaborative workplace.

Nulia Works enabled users with the integrated solution of Teams, OneDrive, and SharePoint to improve communication, minimise travel, and reduce reliance on email and phone calls.

The solution was installed quickly and rolled out to end users with minimal effort.

“Nulia was easy to implement and provides our users with the tools to increase their digital awareness. We can now use the full suite of Office 365 tools thus giving us a greater return on investment”
