

REMOTE WORKING READINESS ASSESSMENT

UNDERSTAND HOW TO GET A SCALABLE AND RELIABLE REMOTE WORKING SOLUTION

As we adapt to an alternative way of life you likely have a requirement to provide a remote working solution for your teams now many, if not all of them are working from home as a result of the COVID-19 pandemic. The Remote Working Readiness Assessment is designed to provide a collaborative workshop which evaluates aspects of remote working and provide answers to your questions in order to form a vision for a viable remote working solution.

There are several factors to consider when looking to enable productive remote workers in the 'right' way. Few, if any, companies have time for a drawn-out process right now. They need to enable remote workers rapidly and they need them to be as productive as possible right now.

Obviously, our way of life and everything associated with it has been upended quickly. Companies are scrambling to enable up to 100% of their staff to work from home. Understanding how your business approaches differing remote working scenarios is a critical step in arriving at a scalable and reliable home or remote working solution. Failing to prepare, is preparing to fail.

WHAT DOES THE REMOTE WORKING READINESS ASSESSMENT COVER?

The service is delivered in one (1) day, and is made up of:

- Interactive workshop (information gathering and Q&A)
- Summary presentation of findings and recommendations

At the end of the day, the resulting presentation will be shared with the stakeholders and a discussion can be had around capacity and capability to execute on any identified requirements or changes.

A SCALABLE AND RELIABLE REMOTE WORKING SOLUTION SHOULD:

1. Ensure a consistent end-user experience as more remote workers come online
2. Make the most of current investments and capabilities
3. Be highly available and Disaster Recovery ready
4. Enable linear growth, or burst capability
5. Be accessible in a secure manner and not present governance risk

READY TO GET AN UNDERSTANDING OF YOUR STRATEGY AND COURSE CORRECT WHERE NEEDED?

We've been doing this type of work for many years and have compiled our "[Top 10 IT Considerations for Remote Working Readiness](#)" to be sure you can put your employees and your business in the best position to weather this storm. We use this shortlist during the workshop as a guide to making sure you get the important things right for your organisation with eyes wide open.

If you would like an understanding of where you are now, and where you need to get to for optimal remote working, reach out to your chosen IT Partner, or contact info@insentragroup.com to register your interest and request a call from one of our solution architects.
